

MINI COUPLER DELIVERS MAXIMUM BENEFITS

AEM is proud to be among the first to announce the hot release of Doherty's newest product innovation, the Dualock Mechanical Coupler. With the goal of providing operators of mini excavators with a high quality mini coupler that includes the same safety features as their larger models, Doherty is now leading the way in this market.

"We wanted to develop a mini mechanical coupler with the same safety features as our hydraulic models, yet be affordable," explains Doherty Attachments managing director, Jeremy Doherty. "We also wanted to make it auto lock so the operator only needs to leave the cab once to unlock the coupler."

As with the Doherty Snaplock+ Coupler, the Dualock offers a double-insurance policy with two safety locking mechanisms. Both the front and rear safety-locks, lock automatically as soon as the rear primary jaw locks. The safety-locks provide a second level of safety for the operator and workers in the case of loss

of engagement force.

From all reports, the feedback from operators using and trialling the Dualock have been very positive. Most are noticing it's twice as fast as the pull-pin type coupler, and that it offers the advantage of allowing the operator to Face mode implements.

Jeremy says many people are commenting on the affordability of this new model, "We've had lots of feedback already about the low cost and fast operation of this coupler, giving them quicker payback."

Doherty's advanced design and manufacturing process ensures your mini excavator can now be equipped with a world leading mechanical coupler which is automatic lock, mechanical unlock and dual locking, ensuring safety at a similar price to the old age pull pin type coupler.
