

Bigger and better in Brisbane

Doherty Couplers and Attachments are excited about the recent relocation to their new purpose-built, state-of-the-art facility in Brisbane, QLD. This move represents a pivotal moment in Doherty's journey towards future growth and improved services for their valued customers.

The new facility which includes 3,350m² of internal workshop and storage, an additional 1,200m² of undercover storage, and 2,000m² of yard space, provides Doherty with ample space to further expand its manufacturing and assembly operation. With additional investment in machinery and testing equipment and now the space to further grow the team, this significant expansion will lead to increased productivity, a wider range of products readily available, the ability

to service a broader range of industries, and a more widespread reach across Australia and beyond. Operational since the beginning of August and with an expanding team, they are looking forward to the future.

CEO, Jeremy Doherty, expresses his excitement about the new facility, saying, "Having been in the pipeline for 18 months, we're thrilled to finally be here." He adds, "This move allows us to continue our incredible journey - with a significant increase in stock on-hand and more efficient operations, we can respond to customer needs more effectively, maintaining our role as a leader in the excavator attachment industry." Jeremy continues, "We look forward to welcoming customers into the new facility to show why the Doherty team are world class, just like our attachment range."

As they settle into their new Brisbane base, the Doherty team remains committed to delivering quality products and service, and extend their thanks to customers for their continued support. **AE**
